

Abstract of the Disclosure

A personal information collection and delivery system has a
5 collection component executed by a first enterprise, for collecting
information for specific individuals from a plurality of information
provider's sites, an aggregation component executed by the first enterprise,
for aggregating and storing the collected information identified for
individual ones of the specific individuals; and a plurality of delivery
10 components executed by a like plurality of second enterprises, for
delivering said aggregated information to the specific individuals. This
system is characterized in that delivery is distinguished to individual ones
of the second enterprises. In some cases the information providers are the
second enterprises that manage delivery, in which case they may limit
15 access according to a variety of variables. Also in some cases the providers
also provide transactions services, and the specific individuals connecting
through the system may accomplish transactions, which may include drag-
and-drop implementation.
